DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 2, 5 and 8-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Suzuki et al. A sensor and interface arrangement as claimed is disclosed beginning at column 7, line 23.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/622,696

Art Unit: 3747

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al in view of Ohba et al. Suzuki et al discloses the claimed invention as stated above except for shielding of the interface circuit casing. Ohba et al teaches that it is known to provide a sensor interface circuit with a conductive casing for shielding. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the sensor interface circuit of Suzuki et al with a conductive casing, as taught by Ohba et al, in order to protect the circuitry from electrical interference.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al in view of Frankeny et al. Suzuki et al discloses the claimed invention as stated above except for the cooling flange. Frankeny et al teaches that it is known to provide a circuit casing with a cooling flange. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the sensor interface circuit of Suzuki et al with a cooling flange, as taught by Frankeny et al, in order to protect the circuitry from excessive heat.

Claims 6 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al in view of Maxwell et al. Suzuki et al discloses the claimed invention as stated above except for the waterproof connection. Maxwell et al teaches that it is known to provide a sensor assembly with waterproof connecting means. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the sensor interface circuit of Suzuki et al with waterproof connecting means, as taught by Maxwell et al, in order to prevent moisture damage.

Application/Control Number: 09/622,696

Art Unit: 3747

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al in

view of Matsubara et al. Suzuki et al discloses the claimed invention as stated above except for

the shielded connecting line. Matsubara et al teaches that it is known to provide a sensor

interface circuit with a shielded connecting line (column 2, lines 26-38). It would have been

obvious to one having ordinary skill in the art at the time the invention was made to provide the

sensor interface circuit of Suzuki et al with a shielded connecting line, as taught by Matsubara et

al, in order to protect the circuitry from electrical interference.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Andrew M. Dolinar whose telephone number is (703) 308-1948. The

examiner can normally be reached on Mon. - Thu. (7:30-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Gene Mancene can be reached on (703) 308-2696. The fax phone numbers for the

organization where this application or proceeding is assigned are (703) 872-9302 for regular

communications and (703) 872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-0861.
